A
REPORT
ON

"HOTEL MANAGEMENT SYSTEM"

Submitted to

POOJYA DODDAPPA APPA COLLEGE OF ENGINEERING, KALABURAGI
(An Autonomous Institution, Affiliated to V.T.U., Belagavi and Approved by AICTE.)
in the partial fulfillment of the requirements for the award of degree of

BACHELOR OF ENGINEERING
IN
COMPUTER SCIENCE AND ENGINEERING
For the academic year 2024-2025

Submitted by

SHARATH REDDY
3PD23CS142
SHIVADARSHAN V B
3PD23CS145
SHIVAPRASAD S D
3PD23CS147

Under the guidance of

Prof. Pooja Aspalli
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Hyderabad Karnataka Education Society's
Poojya Doddappa Appa College of Engineering
KALABURAGI- 585102
(An Autonomous Institution, Affiliated to V.T.U., Belagavi)

Department of Computer Science and Engineering

CERTIFICATE

Certified that the Report titled "HOTEL MANAGEMENT SYSTEM" is a Bonafide work carried out by SHARATH REDDY (3PD23CS142), SHIVADARSHAN V B (3PD23CS145) AND SHIVAPRASAD S D (3PD23CS147) of B.E IV Semester in partial fulfillment for the award of Bachelor of Engineering in Department of Computer Science and Engineering of Poojya Doddappa Appa College of Engineering, Kalaburagi, an Autonomous Institution, Affiliated to V.T.U., Belagavi during the year 2024-25.

ACKNOWLEDGEMENT

I express deep sense of gratitude and indebtness to my esteemed institute PDA COLLEGE OF ENGINEERING, KALABURAGI and DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING which has provided me an opportunity to fulfill the most cherished desire to reach my goal.

I express my foremost gratitude to my Principal, Dr. S. R. Patil for their constant support and valuable guidance.

I am thankful to Dr. Sujatha Terdal, Head of the Department of Computer Science and Engineering, for giving permission to carry out this Technical Seminar in the college.

I express special gratitude to my guide Prof.Pooja Aspalli, for inspiration, guidance, constant supervision, direction, and discussions in successful completion of the Technical Seminar.

I express my heartfelt thanks to the staff members of the department, who helped me in completion of this Technical Seminar directly and indirectly within the schedule period.

Finally, I am very thankful to my beloved parents and friends.

SHARATH REDDY

COLLEGE VISION:

To be an institute of excellence in technical education and research to serve the needs of industry and society at local and global levels.

COLLEGE MISSION:

- To provide a high-quality educational experience for students with values and ethics that enables them to become leaders in their chosen professions.
- To explore, create and develop innovations in engineering and science through research and development activities.
- To provide beneficial service to the national and multinational industries and communities through educational, technical, and professional activities.

DEPARTMENT VISION:

To be a premier department in Computer Science and Engineering field by providing quality education through teaching, learning, research, and innovations to serve the industry and society.

DEPARTMENT MISSION:

- Develop an environment for better teaching and learning in collaboration with industry, premier institutes, and alumni.
- Produce competent engineers to meet the requirements of the industry and the society.
- Encourage students to pursue higher education, research work and to take up administrative responsibilities through leadership.

ABSTRACT

The **Hotel Management System** is a web-based mini project designed to simplify and streamline hotel operations such as booking rooms, viewing services, and displaying hotel information. This project focuses on building a responsive and user-friendly frontend interface using HTML and CSS. The system allows users to navigate different sections like Home, Rooms, Booking, and Contact, with a seamless experience. A basic booking form collects user details and shows a confirmation upon submission.

This project demonstrates how effective web design can enhance the usability and professionalism of service-based applications. It serves as a foundation for integrating backend technologies in future development, such as storing booking data in databases and adding admin functionalities. The system was developed as part of an academic mini project to understand frontend design and web UI development.

INTRODUCTION

In the modern hospitality industry, the use of digital platforms has become essential to manage hotel services, streamline bookings, and improve customer satisfaction. The **Hotel Management System** mini project is a web-based solution designed primarily for learning and academic purposes. It simulates the essential components of a hotel website with a focus on frontend development using modern web technologies.

This system includes a visually appealing homepage, an intuitive booking form, and a confirmation page that acknowledges successful room reservations. Users can navigate between different sections such as **Home**, **Rooms**, **Booking**, and **Contact**, providing a seamless and interactive experience. The interface design emphasizes a clean layout, consistent color schemes, responsive design elements, and user-centric navigation.

Developed using **HTML** and **CSS**, with enhancements through **Google Fonts** and responsive layout techniques, this project highlights the importance of frontend aesthetics in improving the usability of service-oriented web applications. While the current version functions as a static interface without backend integration, it offers a solid framework that can be extended in future versions to include database connectivity, authentication, room availability checking, and admin control panels.

This project not only helps in understanding how web pages are structured and styled but also encourages future development in full-stack web applications for real-world hotel management systems.

SCREENSHOTS

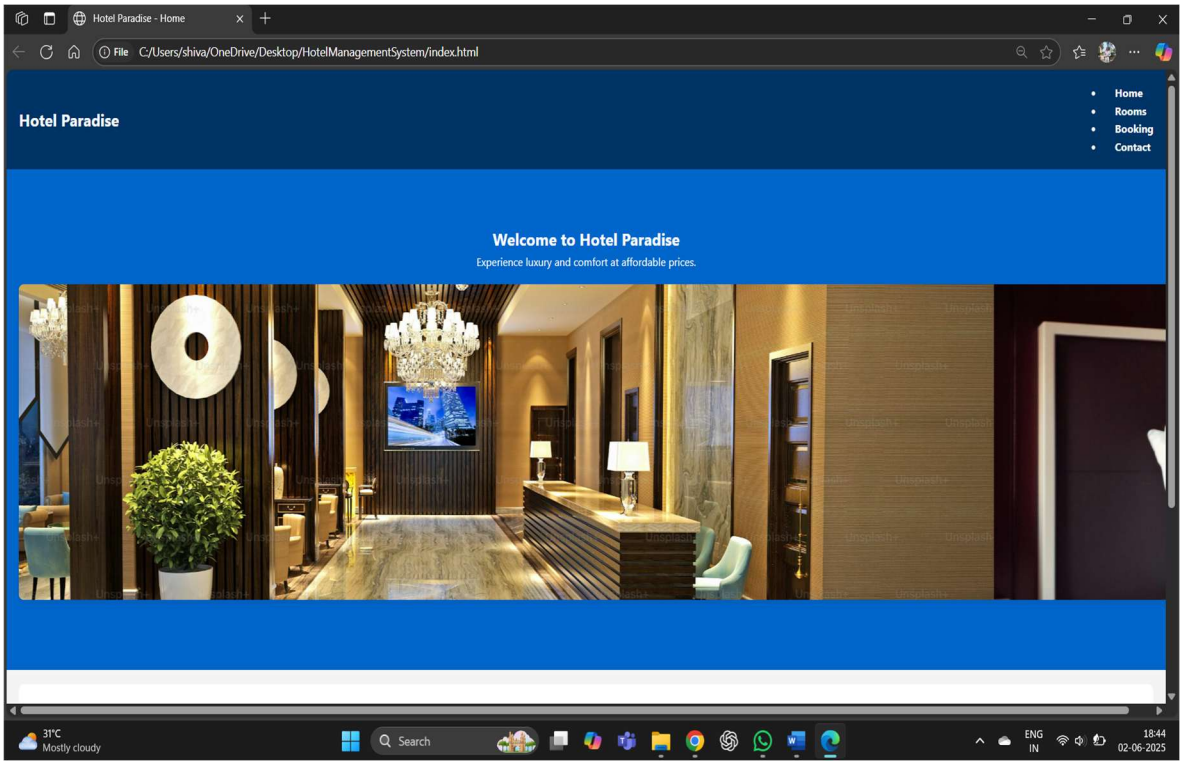

Fig. 1.1: This screenshot illustrates the main landing page of the Hotel Management System. It features a responsive navigation bar, a welcome message in the hero section, an informative "About Us" block, and a footer with copyright details.

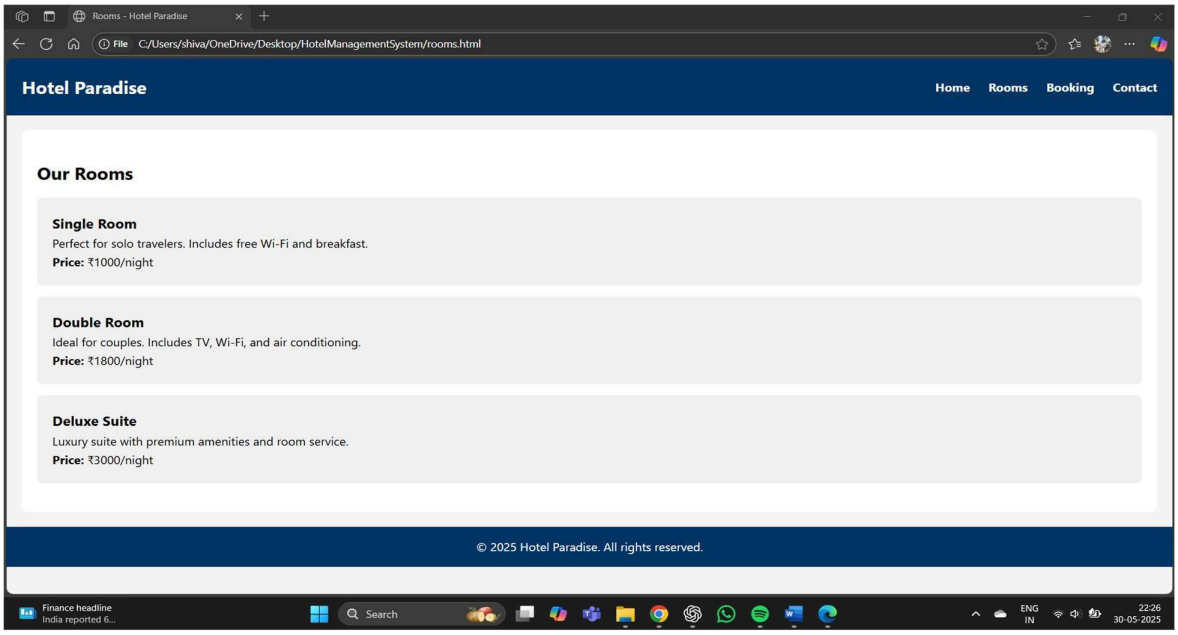

Fig. 1.2: This figure shows the "Our Rooms" section of the Hotel Management System. It lists available room types—Single Room, Double Room, and Deluxe Suite—along with their descriptions and pricing details.

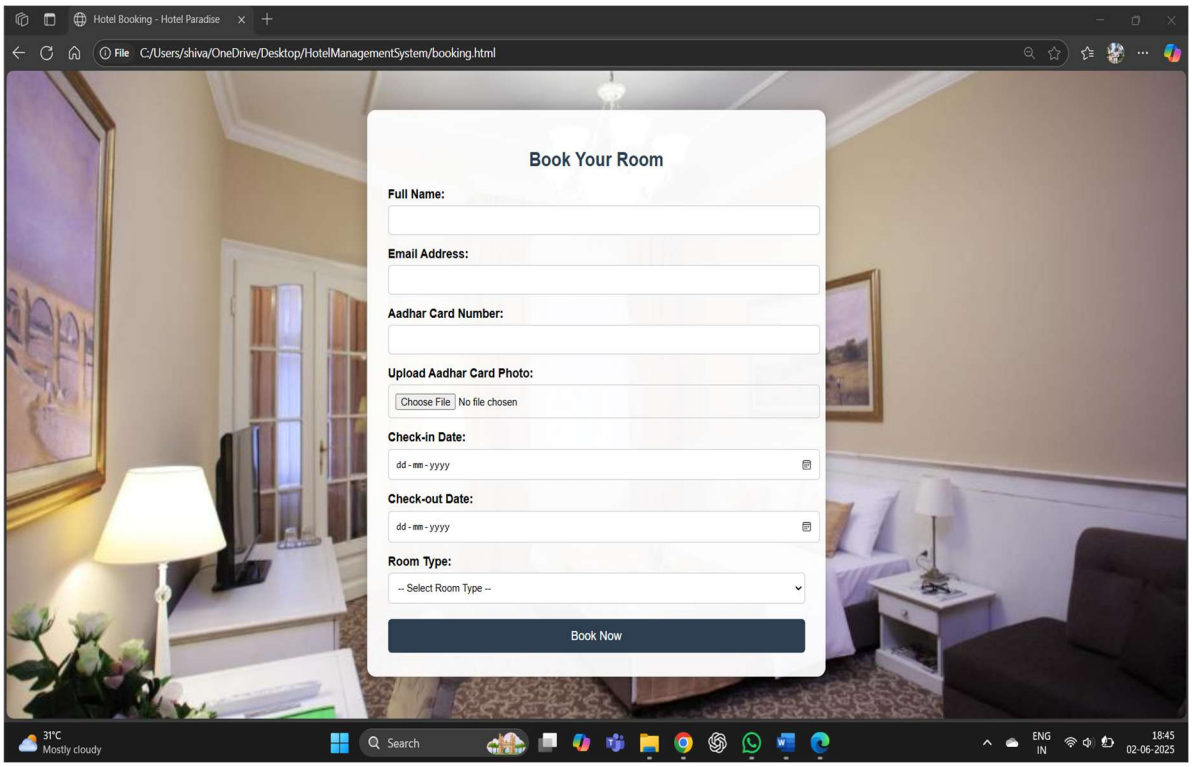

Fig. 1.3: This page provides a clean and user-friendly interface for booking a room. It includes fields for entering the guest's name, email, check-in, and check-out dates. The “Book Now” button submits the form, triggering the booking process and storing the data in the system.

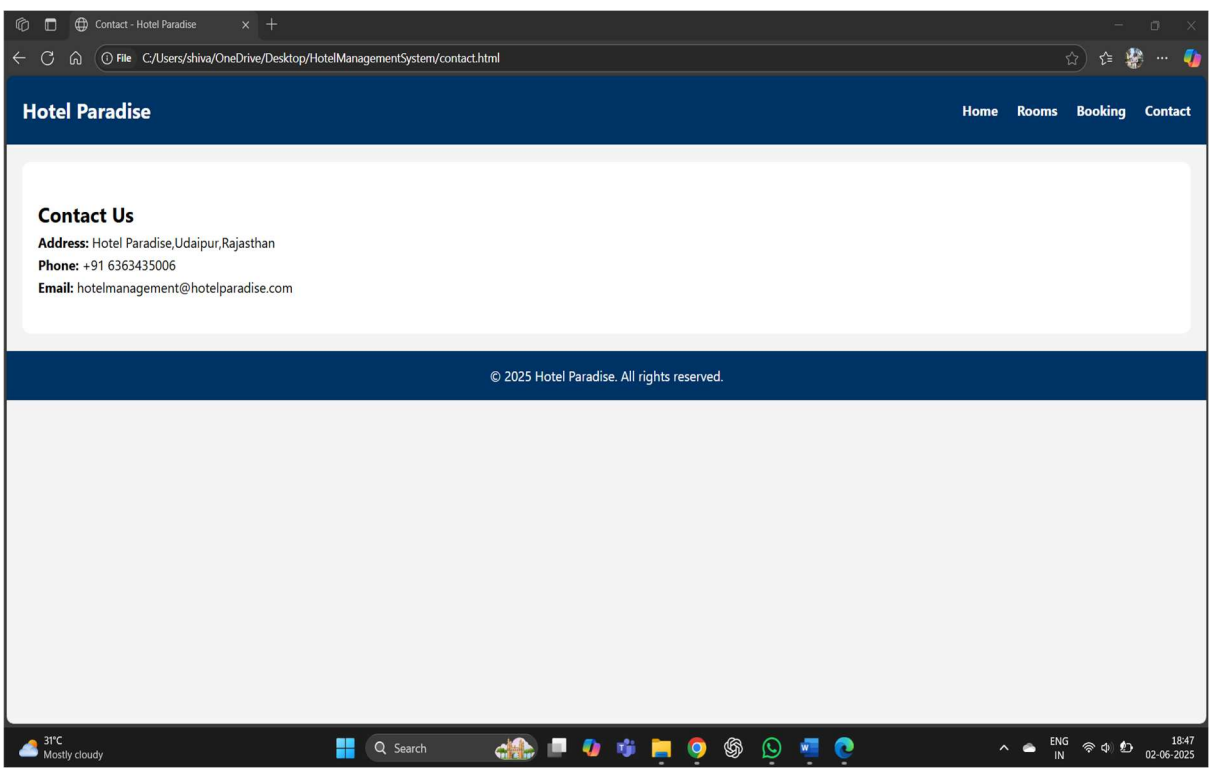

Fig. 1.4: This section provides essential contact details of Hotel Paradise, including the address, phone number, and email. It enables customers to reach out for inquiries, support, or direct reservations, enhancing communication and customer service.

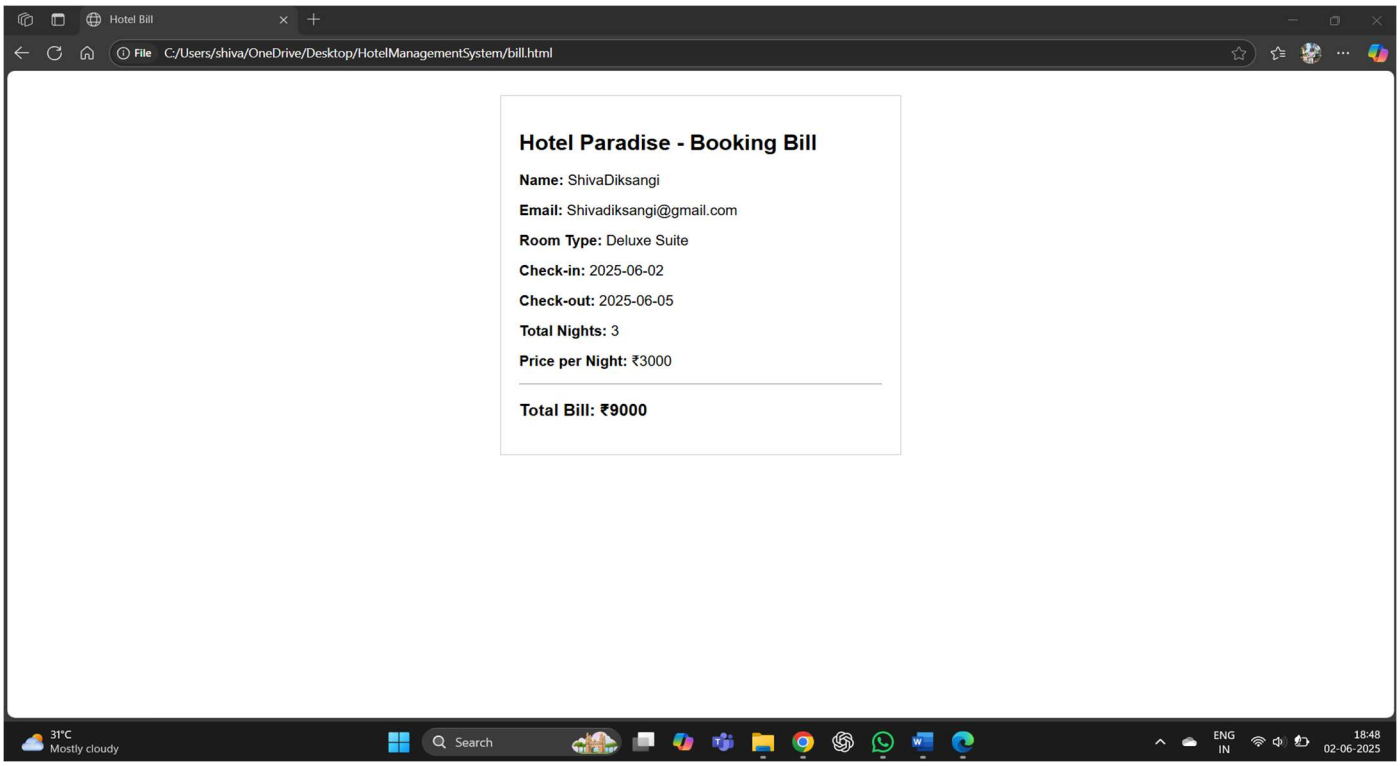

Fig 1.5: The figure above displays the bill generated after a user completes their booking. It shows the customer's name, email, room type, check-in and check-out dates, total nights, room rate, and the total bill. This bill is dynamically generated based on the user's input from the booking form.

CONCLUSION

The Hotel Management System developed through this project successfully addresses the critical needs of managing daily hotel operations in an efficient and systematic manner. By automating core functions such as room reservations, guest check-in and check-out, billing, and record keeping, the system significantly reduces manual workload and minimizes errors that commonly occur with traditional paper-based methods.

This system enhances operational efficiency by enabling quick access to information, improving communication between departments, and facilitating real-time updates on room availability and customer data. It also improves customer satisfaction by speeding up the booking process and providing accurate billing and service management.

The use of a centralized database ensures data consistency and security, making it easier for hotel staff to maintain accurate records and generate reports for decision-making purposes. Moreover, the user-friendly interface of the system allows staff members with minimal technical knowledge to operate the system effectively, thereby reducing training time and operational costs.

This project highlights the importance of integrating technology into the hospitality sector to meet growing customer expectations and competitive market demands. Future enhancements could include online booking integration, mobile app support, customer feedback modules, and advanced analytics to provide deeper insights into business performance.

Overall, the Hotel Management System is a valuable tool that can greatly benefit hotels of various sizes by optimizing resource management and improving overall service quality.
